Notes:

The heat scale is relative to the university with the highest number of publications in the top 10% for citations by category, year and document type.

The top 20 universities have the highest average relative percentage over 21 fields.

Left to right is sorted according to U of Toronto's percentage relative to the highest ranked university (heat).

Numbers show ranks among all universities.

Not shown, top ranked university in Computer Science: Nanyang Technological University; Chemistry: Nanyang Technological University; Space Science: California Institute of Technology; Geoscience: University of Colorado Boulder; Mathematics: King Abdulaziz University; Engineering: Tsinghua University; Materials Science: Nanyang Technological University; Agriculture: Wageningen University and Research Center.

Data source: InCites (InCites dataset) updated Dec. 14, 2015 with Web of Science[TM] content indexed through Oct. 9, 2015.

Limited to articles, review articles and book chapters with at least one author affiliated with a university.

Twenty of the fields are from the Essential Science Indicators schema; Arts & Humanities is from the GIPP schema.

Analysis by the University of Toronto. InCites is available to all U of T student, faculty and staff to generate similar analyses. Access requires registering for the Web of Science under "Sign In" at the top right corner of the home page.
